

Senior. NPI (New Product Introduction) Program Manager

Energous Corporation (Nasdaq: WATT) is the Wireless Power Network global leader. Our award-winning WattUp® wireless charging solution is the only technology that supports both contact and distance charging through a fully compatible ecosystem. Built atop fast, efficient, and highly scalable RF-based charging technology. Energous develops silicon-based wireless power transfer (WPT) technologies and customizable reference designs, and provides worldwide regulatory assistance, a reliable supply chain, quality assurance, and sales and technical support to global customers. The company received the world's first FCC Part 18 certification for at-a-distance wireless charging and has been awarded over 200 patents for its WattUp wireless charging technology to-date.

Our goal is simple: To power everything from the critical tools and devices that keep factories running to the instruments and wearables that monitor patient health – wirelessly. Our next-generation technology – built atop innovative engineering and backed by hundreds of patents – supports a near-limitless range of applications without the need for cumbersome charging cables and ports that limit innovation and are prone to failure. WattUp delivers advanced capabilities and design flexibility to global manufacturers who are building the latest consumer, medical, military, and industrial devices, among many other sectors.

Overview:

At Energous, we are looking for an out-of-the-box thinker who exudes professionalism and poise in their position, collaborating with coworkers to lead critical NPI projects.

Energous needs someone with strong engineering capabilities and experience in semiconductor and/or contract manufacturing to be responsible for ramping a product from pilot to production while being able to work largely autonomously. This includes but is not limited to the successful initiation, planning, execution, monitoring, controlling and finishing of NPI projects through release to volume production. You must be able to follow up on important details while working from a high-level and cross-coordinating with multiple teams towards a cohesive goal. Your job is to launch a brand new technology in a startup environment. And, are you willing to have some fun doing it?

Essential Duties:

- Plan and execute (NPI) builds and lead product transition to volume production while achieving cost, quality and schedule objectives
- Drive cross-functional teams to optimize the supply chain to accomplish specific strategic objectives, while accounting for risks, changes in schedule or demand

- Work with the New Product Development, Manufacturing, and Supply Planning teams to synthesize data into a clear plan
- Oversee yield improvement, tool qualification schedule, and clear-to-build post DVT to ensure we are meeting our program targets
- Identify program risks, determine impact to business, and drive mitigation plans
- Lead cross functional teams to successful resolution of operations issues and challenges
- Have professional experience with semiconductors and/pr contract manufacturing project management
- Coordinate the communication of program status to the appropriate senior management team
- Build relationships and collaborate with Engineering, Supply Chain, Product Management and Technical Operations to lead multiple products to mass production
- Have general understanding of FAB and assembly processes
- Familiarity with reliability tests like HAST, HTOL and ESD
- Understand Product Life Cycle phases

Qualifications:

- Bachelors or master's degree in Engineering, MBA, Technical, Business, Mechanical Engineering, Management, Business/Administration, Supply Chain Management, or Project Management.
- 5-10 years of directly related experience in Manufacturing Operations.
